Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: Nalipi Reddy Rohith

Reg. No.: 192425115

Course Code: MLA0408

Slot: C

Course Name: DEEP LEARNING

Course Faculty: Dr Sudhagar D

Project Title: AI-Powered Personal Finance Management and Budget Recommendation System Using Deep Learning

Module Photographs: (photographs –Module Photo , student contribution module work in the project and presentation image)

Module 1: User & Financial Data Management

Objective:

To collect, store, organize, and manage user and financial data for secure, accurate, and personalized financial management.

Key Steps:

- Collect user details: profile, income, expenses, savings, and financial goals
- Store financial records in a structured database for efficient access and categorize transactions into income, expenses, investments, and bills
- Validate and clean financial data to ensure accuracy and consistency
- Maintain organized financial information for quick retrieval and analysis

Project Description: (here you write what you did in this project (contribution) including Model Description)

Module 1: User & Financial Data Management

- Collects user details such as income, age, occupation, and financial goals.
- Records monthly income from different sources.
- Stores daily and monthly expense details.
- Categorizes expenses into food, travel, shopping, bills, education, healthcare, and entertainment.
- Maintains savings, investments, loans, and recurring payment information.
- Validates and cleans financial data to remove missing or incorrect values.
- Stores user and transaction data securely in the database.
- Preprocesses financial data into a format suitable for deep learning models.
- Calculates basic financial indicators such as total income, total expenses, and savings rate.
- Provides structured financial data to the budget recommendation module.
